Amendments to the Claims

Please amend the claims without prejudice. The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of the Claims

1. (Original) A method for downhole spectroscopy processing comprising:

obtaining raw spectroscopy data using a downhole tool;

processing downhole the raw spectroscopy data using the downhole tool to obtain a downhole processed solution;

transmitting the downhole processed solution to a surface processing system; and using the surface processing system to determine lithology information from the downhole processed solution

wherein processing the raw spectroscopy data comprises:

pre-processing downhole the raw spectroscopy data to obtain a net capture spectra; and performing spectral stripping using time information and the net capture spectra to determine elemental yields.

- (Original) The method of claim 1, wherein processing comprises time-stacking the raw spectroscopy data.
- (Previously presented) The method of claim 1, further comprising comparing the downhole processed solution with data obtained from another downhole tool.
- (Previously presented) The method of claim 1, further comprising displaying the lithology information on a user interface.
- 5. (Previously presented) The method of claim 1, wherein processing the raw spectroscopy data further comprises:

determining dry weight elemental concentrations using the elemental yields;

determining a dry weight for at least one selected from the group consisting of clay, carbonate, quartz-feldspar-mica, pyrite, anhydride, siderite, salt, and coal using the dry weight elemental concentrations; and

computing a matrix property using the dry weight elemental concentrations.

6. (Original) A downhole tool for processing raw spectroscopy data, comprising:

at least one detector for detecting the raw spectroscopy data;

processing means for processing the raw spectroscopy data to produce a downhole processed solution; and

means for transmitting the downhole processed solution to a surface location,

wherein the processing means comprises:

means for pre-processing the raw spectral data to obtain a net capture spectra;

means for performing spectral stripping using time information and the net capture spectra to determine elemental yields.

- (Original) The downhole tool of claim 6, wherein the processing means comprises means for determining elemental yields.
- 8. (Previously presented) The downhole tool of claim 6, wherein the processing means comprises means for computing a matrix property.
- (Previously presented) The downhole tool of claim 6, wherein the processing means further comprises means for determining dry weight elemental concentrations using the elemental yields.
- 10. (Original) The downhole tool of claim 9, wherein the processing means further comprises: means for determining a dry weight for at least one selected from the group consisting of clay, carbonate, quartz-feldspar-mica, pyrite, anhydride, siderite, salt, and coal using the dry weight elemental concentrations; and

means for computing a matrix property using the dry weight.

- 11. (Previously presented) The downhole tool of claims 6, wherein the processing means comprises:
 - a digital signal processor (516);

- a power supply (520) operatively connected to the digital signal processor (516);
- a local memory (518) operatively connected to the digital signal processor (516); and
- a processing interface (514) operatively connected to the digital signal processor (516).

12. (New) A method for downhole spectroscopy processing comprising:

- obtaining raw spectroscopy data using a downhole tool;
- processing downhole the raw spectroscopy data using the downhole tool to obtain a downhole processed solution;
- transmitting the downhole processed solution to a surface processing system; and
- using the surface processing system to determine lithology information from the downhole processed solution:
- comparing the downhole processed solution with data obtained from another downhole tool; and

wherein processing the raw spectroscopy data comprises:

- <u>pre-processing downhole the raw spectroscopy data to obtain a net capture spectra; and performing spectral stripping using time information and the net capture spectra to determine elemental yields.</u>
- 13. (New) A downhole tool for processing raw spectroscopy data, comprising:
 - at least one detector for detecting the raw spectroscopy data;
 - processing means for processing the raw spectroscopy data to produce a downhole processed solution; and
 - means for transmitting the downhole processed solution to a surface location,
 - wherein the processing means comprises:
 - means for pre-processing the raw spectral data to obtain a net capture spectra;
 - means for performing spectral stripping using time information and the net capture spectra to determine elemental yields; and
 - means for comparing the downhole processed solution with data obtained from another downhole tool
